

Ples Bilong Yumi Reader 3

Price: \$16.50

Short Description

This reader has three stories. *River food*—This story explains the food chain from tadpole to crocodile in a quiet river pond. *Ura and the Tadpole*—A tadpole and a river prawn become friends and we watch the tadpole grow. *Ura and the frog*—the tadpole and the river prawn remain friends as the tadpole grows into a frog.

Description

All the readers in this series aim to engage the students through the story content and the illustrations. Many of the stories (but not all of them) were developed from accounts of activities experienced by teacher college students when they were very young and living in their villages. The authors explained to students the sort of stories they wanted and paid these students to write stories based on personal experience.

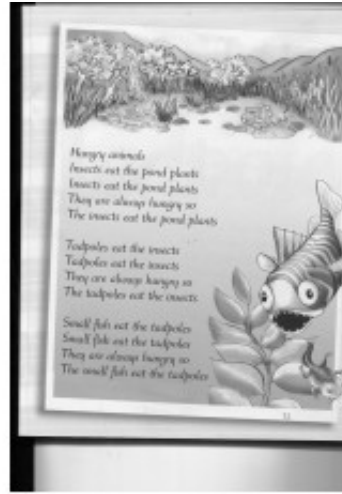

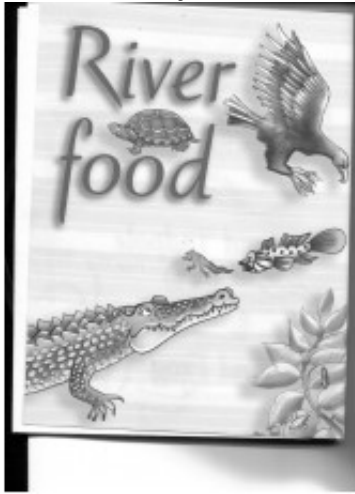

The students' stories were then developed into the stories that appear in the readers. Each reader has three stories and Nina Sanadze illustrates all the stories.

The stories are all about gardening, the environment, plants, animals, family activities, accidents or just adventures. They therefore compliment Lower Primary subjects such as Health, Community Living, Environmental Studies and Language of course.

As each student becomes interested in the story he/she will also learn more about the subject of the story. Some stories have morals to them—lying is bad, stealing is bad, be careful with sharp knives and so on, but most are simply stories that the students will

enjoy.

Product Gallery

The small fish eat the tadpoles in the pond.

The tadpoles eat the insects in the pond.

Insects eat the leaves of plants in the pond.

Animals and plants all live together in the pond.

Big fish eat the small fish
 Big fish eat the small fish
 They are always hungry so
 The big fish eat the small fish

The eagle sees a big fish
 The eagle sees a big fish
 It is always hungry but
 It doesn't get the big fish

The crocodile is fast
 The crocodile is fast
 The eagle ends up in its mouth
 And that's the end of that!

*(The eagle can be seen in the
 mouth of the crocodile in the still.)*
